Introduction to Programming

Lecture 2

VU
Virtual University

Today's Lecture

- Software Categories
  - System Software
  - Application Software
- Introduction to 'C' Language
  - History
  - Evolution
  - Justification
- Development Environment of 'C'

VU Virtual University

There are two main categories of software

- System software
- Application Software

TWAIN

Technology Without An Interesting Name

ANSI C

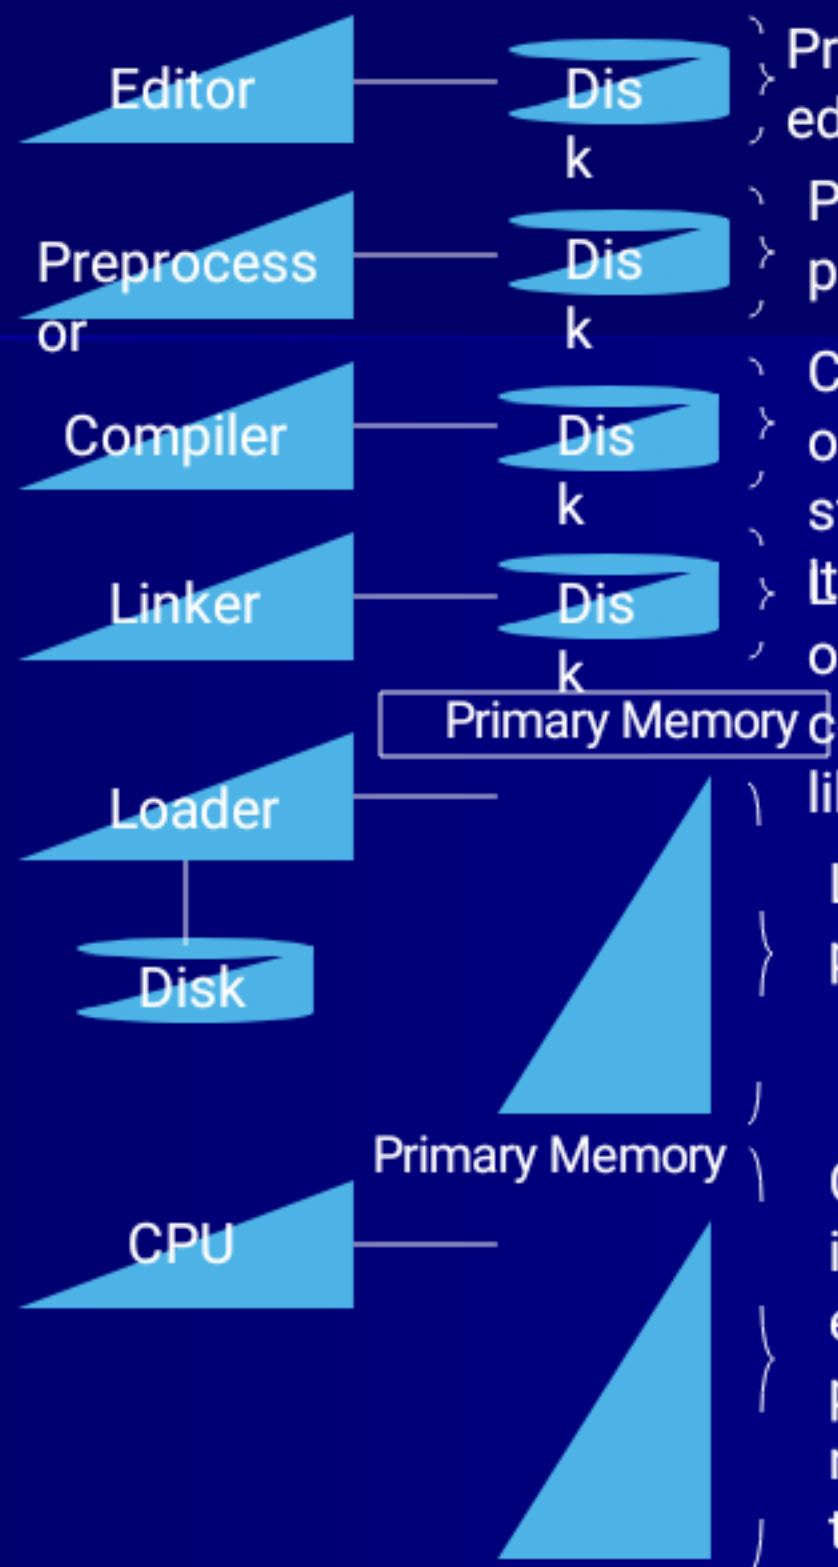
Tools of the trade

- Editor
- Interpreter and Compilers
- Debuggers

Integrated Development Environment (IDE)

It contains

- Editor
- Compilers
- Debugger
- Linkers
- Loaders



Program is created in the editor and stored on disk.

Preprocessor program processes the code.

Compiler creates object code and stores it on disk.

Linker links the object code with the libraries

Loader puts program in memory.

CPU takes each instruction and executes it, possibly storing new data values as the program executes.
